

WHAT IS CLAIMED IS:

1. A system for tracking engineering and development programs comprising:

5 a server configured with a database of engineering and development needs of the multiple users, engineering and development requests, and engineering and development procedures, said server capable of receiving information input from a user into the database for upload to said server including engineering and development programs of said user and engineering and development requests of said user, and allowing a user to download information from the database including engineering and development procedures responsive to engineering and development requests;

at least one computer; and

15 an interface between the at least one computer and the server.

2. A system as claimed in claim 1 wherein access to said server is configured to be secured by user password.

3. A system as claimed in claim 1 wherein the engineering and development programs are tracked from initial development to qualification.

4. A system as claimed in claim 1 wherein said user comprises multiple users.

5. A system as claimed in claim 4 wherein the database is owned by an owner entity.

6. A system as claimed in claim 5 wherein the multiple users comprise users internal to the owner entity and users external to the owner entity.

7. A system as claimed in claim 1 wherein the interface is provided by web pages that can be transmitted from the database to the user.

8. A system as claimed in claim 1 wherein the engineering and development programs comprise a repair development program.

9. A system as claimed in claim 1 wherein said server is configured to store and download text and digital images.

10. A method for tracking engineering and development programs by internal users and external users using a system which includes a server and at least one client system, the method comprising the steps of:

uploading user information to the server;

downloading from the server, web pages configured to direct internal and external users to a database within the server, the database configured with engineering and development program information;

uploading user selections input into the web pages to the server; and

downloading from the server engineering and development procedures responsive to engineering and development requests.

11. A method as claimed in claim 10 further comprising the step of configuring the server to be secured by user password.

12. A method as claimed in claim 10 wherein the engineering and development programs are tracked from initial development to qualification.

13. A method as claimed in claim 10 wherein the engineering and development programs comprise a repair development program.

14. A method as claimed in claim 10 further comprising the step of configuring the server to receive,

5

5

16. A method as claimed in claim 10 further comprising the step of configuring the server to store and download text and digital images.
